

TruView™

Unified Network and Application Performance Monitoring
- Focused on the experience of the end user -

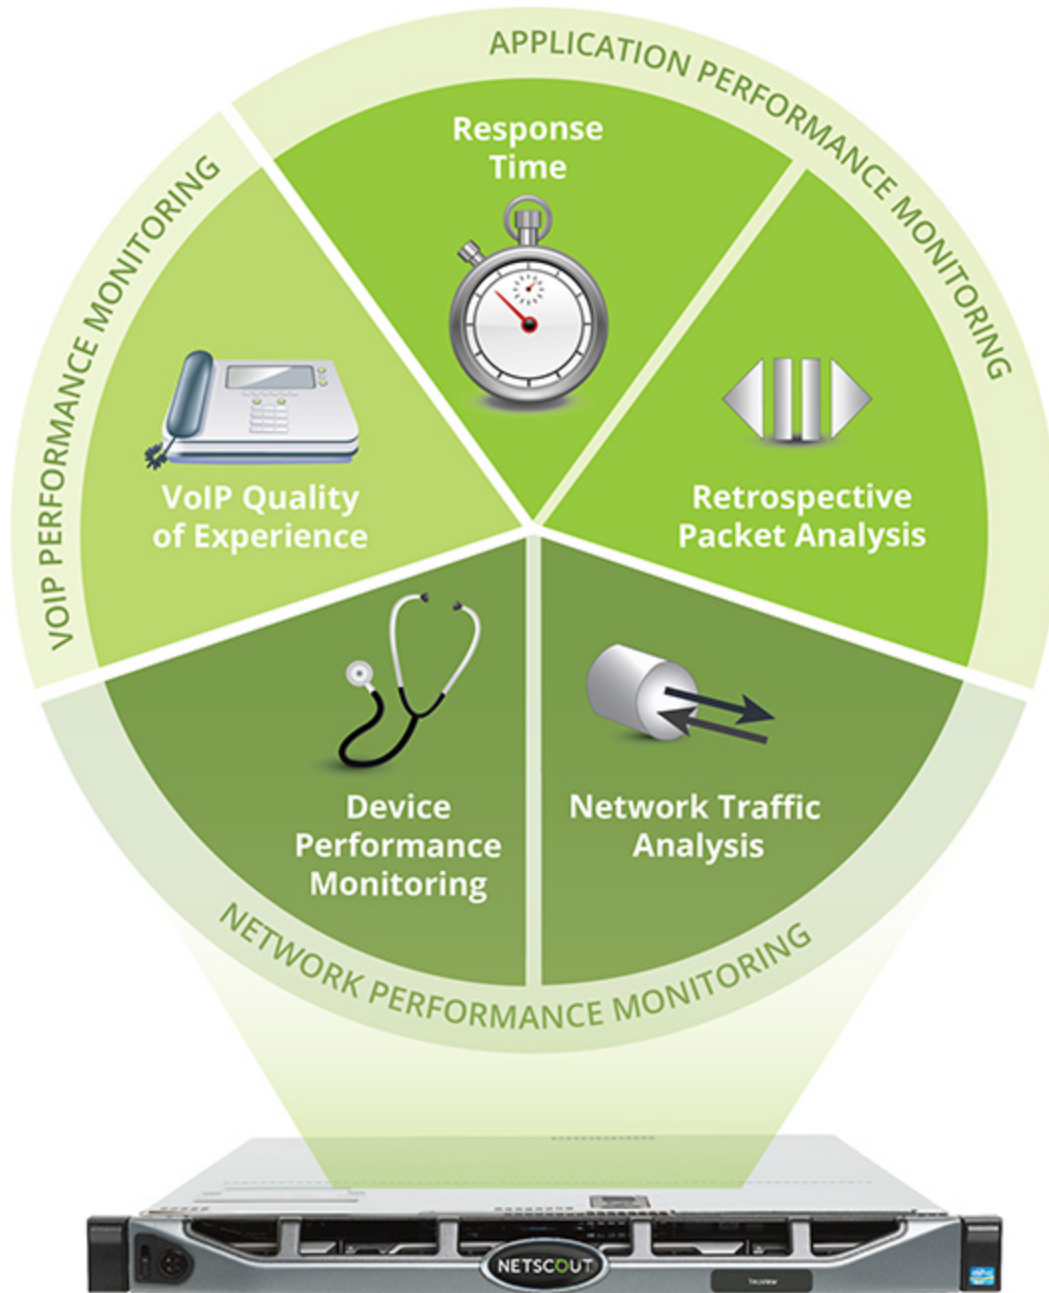

TruView provides visibility into the performance of networks and applications regardless of where they are located. Whether you're troubleshooting an application hosted internally in the data center or in a hosted SaaS, PaaS, IaaS, hybrid or any combination of the above, TruView application monitoring helps you isolate whether the problem is application, server, client, or network related.

- **APPLICATION PERFORMANCE MONITORING TOOL** – The TruView application performance monitoring tool is a passive application monitoring tool that monitors transactions as they occur and reports response time for user, network and application tiers. N-Tier application dependencies are automatically detected allowing you to quickly identify where the problem lies, and drill down to individual transaction detail. The application monitoring tool's transaction details are stored and can be leveraged for troubleshooting, baselining, error detection, performance and availability analysis, trend reporting, and many other functions. [READ MORE](#)
- **NETWORK PERFORMANCE MONITORING TOOL** – See into device/interface availability be it physical or virtual, traffic analysis details across LAN, WAN, and Cloud environments, and uncovers

threatening network traffic patterns where you may be playing host to rogue or other non-production traffic. [READ MORE](#)

- **VOIP PERFORMANCE MONITORING**– Gain one of a kind performance visibility into VoIP quality of experience in an easy to understand graphical depiction of the call, with drill down into each individual call to understand the underlying degradation factors

OVERVIEW

TruView – Focused on the Experience of the End User

TruView is an application monitor and network performance monitoring and management tool that has been recognized by leading analyst firms and honored with

several **INDUSTRY AWARDS**. Ranked as a Best Hybrid AANPM Solution in **ENTERPRISE MANAGEMENT ASSOCIATE'S** Radar Report, TruView is leading the way in network and application performance monitoring, management, troubleshooting, and analyzing both network and application systems, commonly referred to as **APPLICATION-AWARE NETWORK PERFORMANCE MANAGEMENT (AANPM)**.

This application monitor and network performance monitoring and management tool embeds the most important data sources such as packet, transaction, NetFlow/IPFIX, and SNMP and presents analytics in a time correlated single dashboard view. These correlated views will help you to quickly see how well the infrastructure is transporting applications and how well those applications are performing in context of the end user experience. And, TruView's integrated 10 Gbps full line rate stream-to-disk packet capture ensures you'll never miss an important event again, as verified by the Tolly Group independent application and network performance test.
